

Problem

Operational Profit Leakage |

HimShakti is experiencing significant financial leakages within its bio-waste processing division. The Chief Operations Officer needs to identify specific material types and processing center locations causing these margin losses to apply targeted solutions.

Data

Dashboard Data Scope

- Source: Weighbridge logs, shop-floor IoT sensors, and ERP database systems.
- Size: 500+ operational rows.
- Time Frame: Month-1 baseline monitoring period.
- Stat Card: Total Tracked Loss: Rs17,203,520.

Finding

Core Source of Financial Waste

Herbal Extract is our primary source of waste, generating 56.4% of total financial loss, concentrated heavily at processing Center A.

So What

The Impact on Margins

Vision

If this leakage goes uncorrected, HimShakti will continue to bleed high-value inventory value during raw crop extraction phases. High-volume processing at Center A multiplies these inefficiencies, severely impacting overall company profitability and driving up unit costs.

An aerial photograph of a dense, lush green forest. A multi-lane road with white lane markings runs horizontally across the middle of the image. The forest is composed of many tall, leafy trees, creating a thick canopy. The lighting is soft, suggesting an overcast day or early morning/late afternoon.

Recommendation

Strategic Next Steps

- Audit Center A extraction equipment immediately to reduce mass loss.
- Implement strict standard operating procedures specifically for high-waste Herbal Extract runs.
- Deploy automated IoT anomaly alerts for raw crop extraction spikes.
